Environmental Assessment Act

NOTICE OF APPROVAL TO PROCEED WITH THE UNDERTAKING

RE: A Class Environmental Assessment for Fishery Reclamation  
Proponent: Ministry of Natural Resources  
EA File No.: NR-AA-03  
Previously 2-79-0004-000

TAKE NOTICE that the period for requiring a hearing, provided for in the *Notice of Acceptance of the Environmental Assessment* for the undertaking, has expired. I have received no notices requiring a hearing by the Environmental Assessment Board with respect to approval to proceed with the undertaking.

I have considered the purpose of the Act, the above Environmental Assessment, and submissions made to me and I am of the opinion that approval to proceed with the undertaking should be given.

Accordingly, I hereby give approval to proceed with the undertaking subject to the following terms and conditions.

CONDITIONS:

1. Except as otherwise provided by these conditions, the proponent shall comply with all the provisions of the Class Environmental Assessment (Class EA) as accepted which are incorporated by reference herein.
  2. The Ministry of Natural Resources (MNR) shall follow the "Field Environmental Planning Procedure" as submitted for approval on June 30, 1986, as part of the "Class Environmental Assessment for Small Scale MNR Projects" until such time as the procedure is approved, and thereafter follow the Procedure as approved or subsequently amended, insofar as such procedures are not in conflict with this approval.
  3. The undertaking hereby approved includes Fishery Reclamation projects, of a type to which this approval applies, carried out by parties other than MNR with MNR's financial assistance or in waters under MNR's jurisdiction or on Crown lands when MNR gives a licence, permit, grant or approval of any other type.
  4. The undertaking may only be carried out on ponds and lakes. For the purpose of this approval, a pond is a waterbody with no outflow and having a surface area of less than 5 hectares.
  5. MNR shall carry out no more than four Fishery Reclamation projects in lakes per year.
  6. All projects in lakes shall be treated by MNR as "Experimental Management Projects" involving special additional studies to increase the information base about the effects and effectiveness of the use of pesticides in carrying out Fishery Reclamation projects in lakes. Three and a half years following this approval, MNR shall submit a report on Experimental Management Projects documenting the findings of studies carried out on projects during the first three years following this approval, to the Director of the Ministry of the Environment's Environmental Assessment Branch. The planning and carrying out of Experimental Management Projects shall be overseen by a joint MNR/Ministry of the Environment committee chaired by the Hazardous Contaminants Coordination Branch of the Ministry of the Environment.
- 7(1) In the case of projects in ponds where planning has commenced prior to the date of this approval and the treatment phase commences within 60 days following the date of this approval, MNR may, instead of meeting the other requirements of this approval:
- (a) Determine the point in the procedure required by this approval that is equivalent to the point that has been reached in the planning of the project and carry on with project planning and implementation from that point on in accordance with this approval; and
  - (b) Issue, to those parties likely to be directly affected by the project, a notice of the project containing a description of project details including the project's location, an indication of the proposed project start date and the name, address and telephone number of an MNR contact person from whom additional information may be obtained.
- (2) A list of those projects meeting the provisions of this condition shall be submitted to the Director of the Environmental Assessment Branch, Ministry of the Environment, within two months from the date of this approval.
- 8(1) The first notification of a project must be issued to those specified in the Class EA, and, in addition, to municipalities in which the project is to be carried out, to Planning Boards in unorganized territories where MNR's District Manager concludes that the Planning Board may have an interest, to the local Medical Officer of Health in the case of projects involving the use of a pesticide, and to individuals and groups who are users or potential users of potentially affected ground or surface waters.
- (2) In addition to any other method of providing first notification of a project, MNR shall mail the first notice to the local Medical Officer of Health and to individuals and groups who are users or potential users of potentially affected ground or surface waters.
- (3) First notification of a project shall contain at least the following information:
- (a) The purpose of the project;
  - (b) Location of the project;
  - (c) An indication of the proposed timing of the project;
  - (d) In the case of projects involving the use of a pesticide in lakes and ponds potentially used for swimming, bathing, or human consumption, information about the possible persistence of the pesticide;
  - (e) How the public and government review ministries and agencies may have input to the planning process;
  - (f) Notice of the right of the individual, group or other party to request that the project be subjected to an individual environmental assessment using the following wording: "Where you feel, after consulting with the Ministry of Natural Resources staff, that serious environmental concerns remain unresolved, it is your right to request of the Minister of the Environment that the project be subject to the formal review and approval

process under the *Environmental Assessment Act*";

- (g) A description of any present or pending related activities and an indication of their status under the *Environmental Assessment Act*;
  - (h) A return date for comments (at least 30 days after the date the notice is given);
  - (i) Name, address, and telephone number of MNR contact person from whom additional information may be obtained.
- (4) MNR shall not complete the Project Plan for a project nor give second public notice until after the return date for comments as set out in the first public notice.
- (5) Following completion of the project plan, a second notice of the project shall be given to those parties identified by MNR as likely to be directly affected by the project, and to those parties who responded to the first notice. It shall contain the following:
- (a) A description of project details including the project's location;
  - (b) An indication of the proposed project start date;
  - (c) Notice of the availability, for public review, and notice of the general contents of the Project Plan and the Environmental Assessment File for the project;
  - (d) Notice of the right to request that the undertaking be subject to an individual environmental assessment using the following wording: "Where you feel, after consulting with the Ministry of Natural Resources staff, that serious environmental concerns remain unresolved, it is your right to request of the Minister of the Environment that the project be subject to the formal review and approval process under the *Environmental Assessment Act*";
  - (e) In the case of projects involving the use of a pesticide in lakes or ponds potentially used for swimming, bathing, or human consumption:
    - information about the possible persistence of the pesticide in the lake or pond to be treated;
    - notice of the right to request notification of (i) project start date, and (ii) when it has been determined that any applied pesticide residues in the waterbody are at a concentration of less than a specified limit;
    - in the case of projects which may adversely affect a drinking water supply, notice of the right to request that MNR provide an alternative drinking water supply for the period of time in

which the water supply may be affected;

- (f) Name, address, and telephone number of MNR contact person from whom additional information may be obtained;
  - (g) A return date for comments.
- (6) The specified limit referred to in clause 5 (e) is in the case of rotenone a concentration of 1 part per billion and in the case of any other pesticide any concentration determined by the Hazardous Contaminants Coordination Branch of the Ministry of the Environment for purposes of this condition.
- (7) If, following second public notice, there are any significant changes to the Project Plan, further public notice shall be given as specified in subcondition (5), following completion of the final Project Plan.
- (8) In the case of projects involving the use of a pesticide in lakes and ponds potentially used for swimming, bathing or human consumption, MNR shall, upon request, notify the interested party of the project start date prior to that date and when it has been determined that any applied pesticide residues in the waterbody are at a concentration of less than the limit specified under subcondition (6) as soon as feasible following such determination.
- (9) In the case of projects involving the use of a pesticide in lakes and ponds potentially used for swimming, bathing, or human consumption, MNR shall, prior to beginning the treatment phase of a project, erect signs at appropriate locations adjacent to the water body to be treated, to inform users of the treatment. The signs shall advise against eating fish from the water body, swimming in and drinking the water. The signs shall remain in place until MNR has determined, that any applied pesticide residues in the waterbody are at a concentration of less than the limit specified under subcondition (6).
9. In the event of a written request by any party that an individual Environmental Assessment be submitted for a Fishery Reclamation project, MNR shall not proceed with the treatment phase until
- (a) the request is withdrawn,
  - (b) the Minister of the Environment has advised MNR in writing that an individual Environmental Assessment is not required or,
  - (c) an individual Environmental Assessment has been submitted for the project and accepted and the project has been approved under the *Environmental Assessment Act*.
10. The Project Plan, referred to in subsection 6.6 of the Class EA shall be prepared prior to the giving of the second public notice. The

Project Plan shall contain, along with any other appropriate information:

- (a) A statement of the project's purpose;
  - (b) A detailed description of the project including mitigation measures;
  - (c) A map showing the location of the project;
  - (d) The timetable for implementation (treatment, fish stocking, monitoring);
  - (e) A description of the project's predicted significant potential environmental effects as predicted by MNR including, in the case of projects to be carried out on lakes, any predicted significant potential effects on ecological communities, water quality, and nutrient cycling;
  - (f) In the case of projects involving the use of a pesticide in waterbodies potentially used for swimming, bathing, or human consumption, information about the persistence of the pesticide in the lake or pond to be treated;
  - (g) An identification of human users and potential users of potentially affected ground or surface waters and others likely to be directly affected by the project;
  - (h) An outline of the monitoring program to be carried out for the project including a description of the type of information to be collected;
  - (i) In the case of projects involving use of a pesticide, a description of how potential water users will be made aware of the treatment during and following the treatment phase of the project, including a description of how the area is to be sign posted;
  - (j) In the case of projects involving the use of a pesticide in lakes, detailed information regarding how all outflow from the lake will be prevented during treatment and until such time as monitoring indicates that any applied pesticide residues in the waterbody are at a concentration of less than the limit specified under subcondition 8 (6), and regarding any potential environmental effects of such prevention of outflow;
  - (k) A description of how an alternative drinking water supply would be provided if such alternative supply is requested.
11. Once the Project Plan and all the project details have been finalized and prior to proceeding with the treatment phase of a project, MNR's District Manager shall file with the Director, Environmental Assessment Branch, Ministry of the Environment, a Project Summary Report including: a copy of the final Project Plan, reasons for the selection of the preferred alternative, a summary of the concerns of external parties and MNR's response to those concerns; and a statement of how each of the conditions of this approval have or will be met.
  12. In the case of projects involving the use of a pesticide, the application to the Ministry of the Environment for a permit to perform a water extermination shall be accompanied by a copy of the final Project Plan.

#### PART V

##### WATER SLIDES

##### DESIGN

68.—(1) Every water slide shall be so designed that,

- (a) the support structure and frame will safely sustain the weights and pressures reasonably expected to be placed on the water slide over the projected operating life of the water slide;
- (b) the strength of the materials used in the construction of the water slide and the accessories used in and around the water slide will not be affected by exposure to the environmental conditions reasonably expected in the locality where the water slide is erected;
- (c) parts with external surfaces that may come into contact with a person using the water slide are assembled, arranged and finished so that they will not cut, pinch, puncture or cause an abrasion to any person;
- (d) surfaces that may come into contact with a person using the water slide are inert, non-toxic, smooth and easy to clean;
- (e) sufficient ventilation is provided to prevent the concentration of toxic fumes from disinfectants used with the water slide;

(f) the walking surfaces in and about the water slide including the entrance and exit to the water slide are slip-resistant and will not retain water; and

(g) the water slide has a starting zone that is of such a length and is so marked that it provides sufficient time for a person leaving the starting zone to splash down in the splash pool and clear the splash down area safely before the next person splashes down.

(2) Every room that is used to store chemicals or machinery used in the operation of a water slide shall be guarded so as to prevent entry by any person who is not authorized to enter the room by the licensee.

(3) Every mat or sliding apparatus used on a water slide shall,

(a) be free of sharp corners and protrusions;

(b) have a sliding surface that allows smooth movement through the channel of the water slide; and

(c) be so constructed that the impact of a mat or sliding apparatus into a person will not cause injury to the person.

(4) Every water slide channel shall,

(a) be banked so as to keep each person using the water slide safely inside the channel;

(b) be so designed that,

(i) the speed of each person on each curve of the water slide is such that the person can maintain a safe body equilibrium,

(ii) the attachment of channel components form a continuous and smooth surface,

(iii) the curves and tunnels do not create a hazard for a person who impacts with the walls of a channel or the ceiling of a tunnel,

(iv) the continuous and combined action of hydrostatic, dynamic and static loads and deterioration due to environmental conditions reasonably expected in the locality where the water slide is erected do not cause a structural failure that could result in injury to a person using the water slide,

(v) the channel terminates,

(A) at a depth of at least 150 millimetres below the operating

water level of the splash pool, or

(B) where the channel is level for a distance of at least three metres at the exit of the channel into the splash pool, at a height of not more than fifty millimetres above the surface of the water in the splash pool, and

(vi) no change of slope of the channel will cause a person using the slide to be injured.

(5) Subclause (4) (b) (v) does not apply where the design of the termination portion of the water slide in relation to the splash pool does not create a hazard for any person using the water slide.

(6) The amount of water in every water slide shall be such that will create a flow in the channel sufficient to keep each person using the water slide moving in the channel for the entire length of the channel at a speed that will not create a hazard to the person.

(7) Every water slide splash pool shall,

(a) be of sufficient length, width and depth so as to prevent each person splashing down from a channel into the splash pool from contacting the walls or bottom of the splash pool, adjacent channel exits or other persons exiting into the splash pool;

(b) have each inlet for the water circulation system,

(i) of a size that will not create an inlet suction pressure that is hazardous to persons using the water slide,

(ii) located so as to be inaccessible to persons using the water slide, or

(iii) protected with a device positioned in front of the inlet so as to prevent persons using the water slide from being drawn against the inlet; and

(c) so designed as to automatically shut down the water slide if the water level in the splash pool falls below the minimum required for the safe operation of the water slide.

O. Reg. 342/87, s. 68.

#### OPERATION

69.—(1) The area at the top of every water slide shall be supervised by at least one attendant who shall have continuous and direct supervision of that area and who shall be responsible for,

(a) ensuring that persons using the water slide conduct themselves in an orderly manner,

that there is no running or other unsafe behaviour in the upper part of the water slide channels and starting areas and that persons enter and leave the starting zone at safe intervals; and

- (b) supervising all areas of the water slide, other than the splash pool area, that are visible to the attendant from the attendant's station.

(2) The splash pool area of every water slide shall be supervised by at least one attendant who is a life-guard who shall have continuous and direct supervision of that area and who shall be responsible for ensuring that persons using the water slide,

- (a) move into and out of the splash pool in a quick and orderly manner; and
- (b) conduct themselves in an orderly manner and that there is no running or other unsafe behaviour in the lower part of the water slide channels, splash pool or pool deck. O. Reg. 342/87, s. 69.

70. Every water slide shall be equipped with a battery or electronically operated voice communication system between an attendant who is supervising the splash pool and an attendant who is supervising at the top of the water slide. O. Reg. 342/87, s. 70.

71. The daily inspection required to be carried out under section 12 shall be carried out on each water slide,

- (a) before the water is circulated to ensure that no safety hazard exists; and

- (b) with the water circulating to ensure that the pumping and filtering equipment are operating correctly and that there is,

- (i) the correct level of water in the splash pool, and

- (ii) sufficient water flowing in the channels of the water slide,

to ensure the safe operation of the water slide. O. Reg. 342/87, s. 71.

72. Every water slide shall have a sign posted at the entrance to the water slide that conveys the following rules and instructions:

1. Obey all orders given by the attendant and operator.
2. No person shall dive, run, stand, kneel, rotate or stop in the channel.
3. Hands must be kept inside the channel.
4. Users must leave the splash pool promptly.
5. No person shall bring glass, bottles or food into the water slide area. O. Reg. 342/87, s. 72.

73. Ontario Regulation 248/86 is revoked.

74. This Regulation comes into force on the 15th day of June, 1987.
